PORTFOLIO

OBJECTIVE

Senior Software Engineering student graduating in May 2027, seeking a full-time software engineering position.

EDUCATION

University of Puerto Rico, Mayagüez Campus (UPRM)

B.S. Software Engineering

Google Tech Exchange

Semester-long program reinforcing data structures, software engineering skills, and the correct use of generative AI.

Expected Graduation: **May 2027**

GPA: **3.30/4.00**

January 2025 – May 2025

SKILLS

- **Programming:** Python, C++, Java, JavaScript, TypeScript, SQL, Groovy, HTML, CSS
- **Cloud & DevOps:** AWS, Google Cloud (Cloud Run, Cloud SQL, Vertex AI), Docker, GitHub Actions (CI/CD), Jenkins
- **Frameworks & Tools:** Flask, React Native, Streamlit, Qt, MySQL, PostgreSQL, Git, Linux, Jira, Bitbucket, Wireshark
- **Soft:** Teamwork, Leadership, Problem-Solving, Critical Thinking, Communication, Customer Experience

PROFESSIONAL EXPERIENCE

Software Engineering Intern | L3Harris Technologies | Melbourne, FL (*now part-time*)

June 2026 – Present

- Develop **Python** code in the Image Science group to process **NITF** imagery, including electro-optical (EO) and synthetic aperture radar (SAR) images, alongside internal imaging tools for 3D damage detection.
- Cut an internal imaging tool's runtime by close to **70%** by cropping imagery to the area of interest.

Undergraduate Researcher – Full-Stack Developer | ROCS Research Team | UPRM

February 2026 – Present

- Proposed and implemented the authentication redesign: **OAuth 2.0** SSO (Authorization Code + PKCE) with Google and Microsoft across a Flask API and React Native app.
- Hardened the **Docker** image and deployed the API to **AWS** (Elastic Beanstalk, RDS, S3) via GitHub Actions.
- Manage and fix bugs across the API and mobile app, with **50+** merged pull requests across four repositories.
- Presented the research at the 44th Puerto Rico Interdisciplinary Scientific Meeting (**PRISM**) and at UPRM's Industrial Affiliates Program (**IAP**) meeting (oral presentation and poster); helped interview candidates for the team.

Tech Fellow | CodePath | Remote and UPRM, Mayagüez, PR

August 2025 – Present

► **Tech Exchange – Intro to Software Engineering (remote)**

January 2026 – May 2026

- Returned as a Google Tech Exchange alumnus to help teach databases, APIs, frameworks, function mocking, and cloud development with **Python** and **Google Cloud**.
- Built a **dashboard platform** on Google Cloud that monitors student activity and course progress with data pulled from EdStem, paired with an **LLM synthesizer** that interprets student feedback from forms.
- Wrote program proposals, including a plan to scale the dashboard to more courses.

► **Intro to Programming (CIIC3015) at UPRM**

August – December 2025, August 2026 – Present

- Lead **Python** pre-lab discussions, guide students through debugging in labs, and grade projects with feedback.

Software Engineering Intern | L3Harris Technologies | Melbourne, FL

May 2025 – July 2025

- Modernized a **C++** codebase by replacing legacy raw pointers with smart pointers, improving memory safety.
- Built a **Qt** GUI for spectral band selection, letting users work with custom image color bands beyond RGB.
- Automated geometry-file generation and refactored legacy image-processing code into reusable base classes.

Summer Intern Change Management – ITSM Unit | Evertec Inc. | San Juan, PR

June 2024 – December 2024

- Automated code integrity verification between testing and production using Groovy in a **Jenkins** pipeline, optimizing the process by **95.71%** while saving 5 hours daily and over **\$3,000** in costs.

Special Projects Intern | MCS Healthcare Holdings, LLC. | San Juan, PR

May 2023 – December 2023

- Automated phishing detection with **KnowBe4 PhishER** (YARA rules) and raised training compliance by **63%**.
- Integrated an Azure REST API into Fortify Data and reconfigured **60+** corporate phones with Microsoft Intune.
